# The ROI of Featured Listings

## for Select Physical Therapy

A research-backed analysis of patient lifetime value, acquisition costs, and directory ROI for pediatric therapy providers serving the autism community in Florida.

**Prepared by Keith**

February 2026

# 1. The Opportunity

Children with autism spectrum disorder (ASD) represent the highest-value patient population in pediatric therapy. The data is unambiguous:

| $10,279 | 11-16x | 9x |
|---|---|---|
| Annual outpatient spending per ASD child | Higher PT/OT/speech utilization vs non-ASD | Higher total health spending vs non-ASD |
| *AHRQ MEPS, 2025* | *Cummings et al., JADD 2016* | *AHRQ MEPS, 2025* |

**What this means for Select:**

Select Physical Therapy's pediatric division (Select Kids) offers PT, OT, and speech therapy across 55 Florida locations. Your patient population includes children with ASD who typically:

- Receive therapy **1-2x per week per discipline**, often across multiple disciplines simultaneously
- Stay in therapy for **2-3+ years** (developmental, not episodic care)
- Generate **$5,000-$15,000+ per year** in billable services per child (depending on discipline mix and payer)
- Have **exceptionally high retention** — parents of ASD children are highly motivated and engaged

Florida-specific data confirms this pattern: Florida Medicaid alone spends $3,695-$4,039 per year per ASD child on PT/OT/speech therapy — and Medicaid rates are the **floor**. Commercial insurance reimbursement is significantly higher.

# 2. The Problem

**Parents struggle to find providers.**

Research consistently shows that "information on services" and "system navigation" are the **#1 unmet need** for families of children with autism (CASDA National Needs Assessment, n=3,273 caregivers). Almost all parents use the internet to research therapy providers, and they rely heavily on online directories, other parents' experiences, and provider profiles when making decisions.

**Current marketing channels are expensive.**

| Marketing Channel | Cost | Source |
|---|---|---|
| Google Ads (PT keywords) | **~$33 per lead** | LocaliQ 2026 |
| Google Ads (after conversion) | **~$55 per patient** | Derived (60% conversion) |
| Healthcare avg (all channels) | **$150-$300 per patient** | Healthcare Finance News |
| Behavioral health keywords | **$100+ per lead** | LocaliQ 2026 |

Meanwhile, **82% of patients** use online reviews and directory sites when evaluating providers (Reputation/YouGov, 2022), and **53% of therapists** report directories as their primary referral source (Wellnite, 2023).

# 3. The Solution

FloridaAutismServices.com is Florida's largest autism resource directory with over 3,700 providers. Featured Listings give Select Physical Therapy priority placement in front of families actively searching for pediatric therapy services — at a fraction of the cost of paid advertising.

| | Google Ads | Featured Listing |
|---|---|---|
| Cost per location/mo | $500+ typical | **$21/mo** |
| Targets autism families | Broad audience | **100% autism-focused** |
| Runs when | Budget runs out = stops | **24/7, 365 days/year** |
| Charges per | Per click ($5 avg) | **Flat monthly rate** |

# 4. The Math

**1–2**

**new families**

As few as **1–2 new families** finding Select Physical Therapy through FloridaAutismServices.com could cover your **entire Featured Listing investment** — across all **55 Florida locations** — for the full year.

**Here's how the math works:**

- Your Enhanced Featured Listing (Founding Partner, annual billing): **$11,506/year for all 55 locations**
- One pediatric ASD patient receiving PT + OT or speech, 2x/week, commercial insurance: **~$12,000-$19,000/year**
- Even at conservative Medicaid rates, one multi-discipline ASD patient generates **$5,000-$6,000/year**
- Multi-year retention means that single patient could generate **$15,000-$40,000+ over 2-3 years**

*That's not a typo. The math works because pediatric ASD patients have exceptionally high lifetime value, and your Featured Listing runs 24/7, 365 days a year, targeting the exact population you serve.*

# The Bottom Line

## Only 1–2 families need to find you.

## To cover all 55 locations.

## For the full year.

Backed by peer-reviewed research and federal health data.
Not estimates. Not projections. Published science.
